

For Students:

LLMs & Data Privacy

ChatGPT is a Large Language Model. Swathes of “Big Data” scraped from the internet was used to train its systems. Currently a hot topic!

Rules of Thumb

- ◇ Don't enter sensitive data. Free products turn users into money!
- ◇ LLMs can hallucinate: consider fact-checking w/ secondary sources
- ◇ Careless prompts can be met with careless results
- ◇ Like Googling, we use *confidence thresholds*
- ◇ Carry an ethical set of principles with you as you prompt

6. Will you use my conversations for training?

- a. Yes. Your conversations may be reviewed by our AI trainers to improve our systems.

There are a lot of free online repositories for prompts. Reddit and discord are some examples. I've found my most useful prompts from these.

Strategies

- ◇ Treat as a person, rather than a search engine
- ◇ Cataloguing—save modular prompts for editing
- ◇ Bad result? Click the ✎ icon to modify prompt
- ◇ Use sequential words like ‘after’ or ‘before’
- ◇ Use one (or more) advanced strategies
- ◇ Long response get cut off? “Did you time out?”

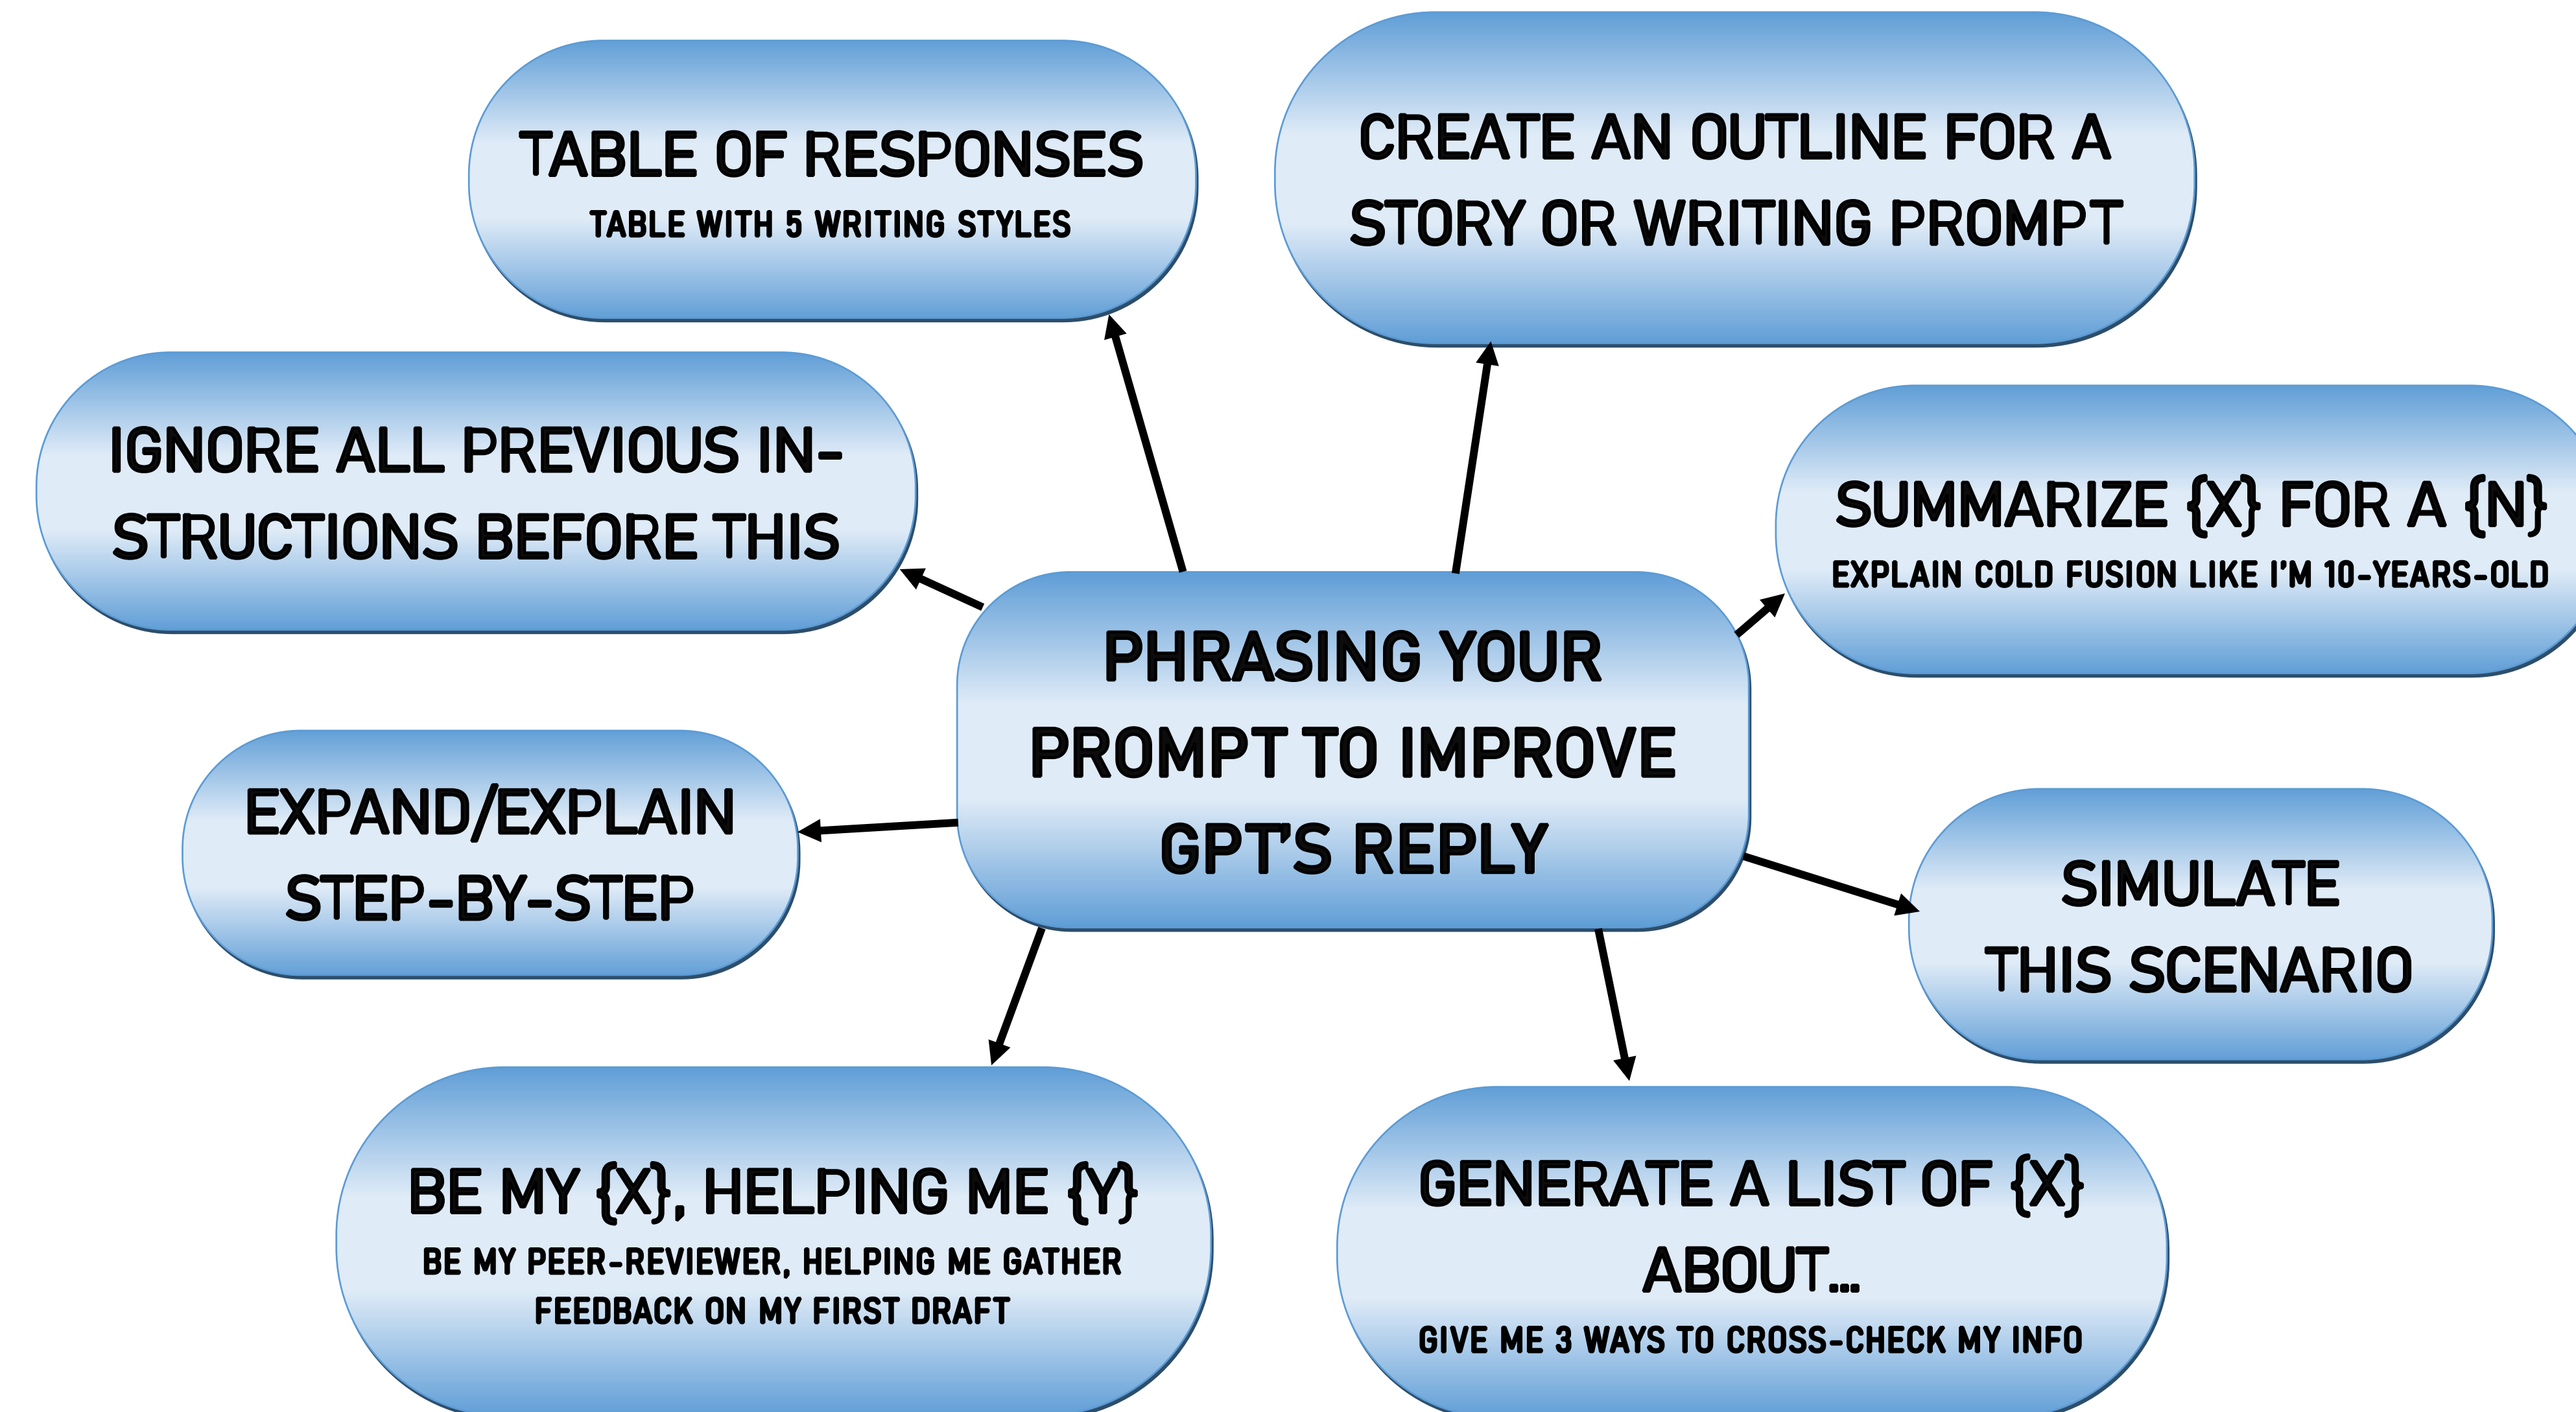

General Structuring

- ◇ 5W's—aim for >2 (Who, What, Why)
- ◇ Like Googling, we use *confidence thresholds*
- ◇ Roleplaying—Gives an idea of relevant tasks
- ◇ Place context: use ‘before/after’ or parenthesis to give additional constraints

Shortcomings

- ◇ “Where'd you hear that, the internet?” Common sense goes a long way with GPT
- ◇ GPT is quite new, don't get tricked by deceptive marketing from AI. Many just re-use GPT.
- ◇ We still don't know how it works, so remember that all this information may not hold up in future versions of GPT!
- ◇ Recognize when it's not up to the job

Prompt Writing & Engineering

Advanced Techniques

- ◇ Daisy chaining— follow up with another prompt
- ◇ Self-assisted— Have GPT help build your prompt “Be my prompt engineer...Ask if I agree before...”
- ◇ More text isn't a bad thing. Good prompts are hefty
- ◇ Get specific: do you need a Table? HTML code?

Example ‘be my’ or ‘act as’ Roles

Linux Terminal, {position} interviewer, pair programmer, college {subject} professor, creativity expert, brainstorm buddy

Daisy-chaining

Write an article about GPT. First, give an outline with a header, teaser, and 2-3 subheadings.

[Output]

Now write 5 different subheadings.

[Output]

Add 5 keywords for each subheading.

Recursive prompt + Mind Map

Generate a mind map as a text list about {topic}, write 5 main branches. Recursively generate two subbranches for each main branch and two subbranches for each subbranch. Every item should be formatted with hierarchical numbering.

Daisy Chaining + Adding Context

Can you give me ideas for an end of year major project for Level 3 Art Design students? I'd like to cover fine art, graphic design, product design and architecture, [Output]

Expand one each of these with 5 examples for each point.

[Output]

Where applicable, give specific product/brand names.

[Output]

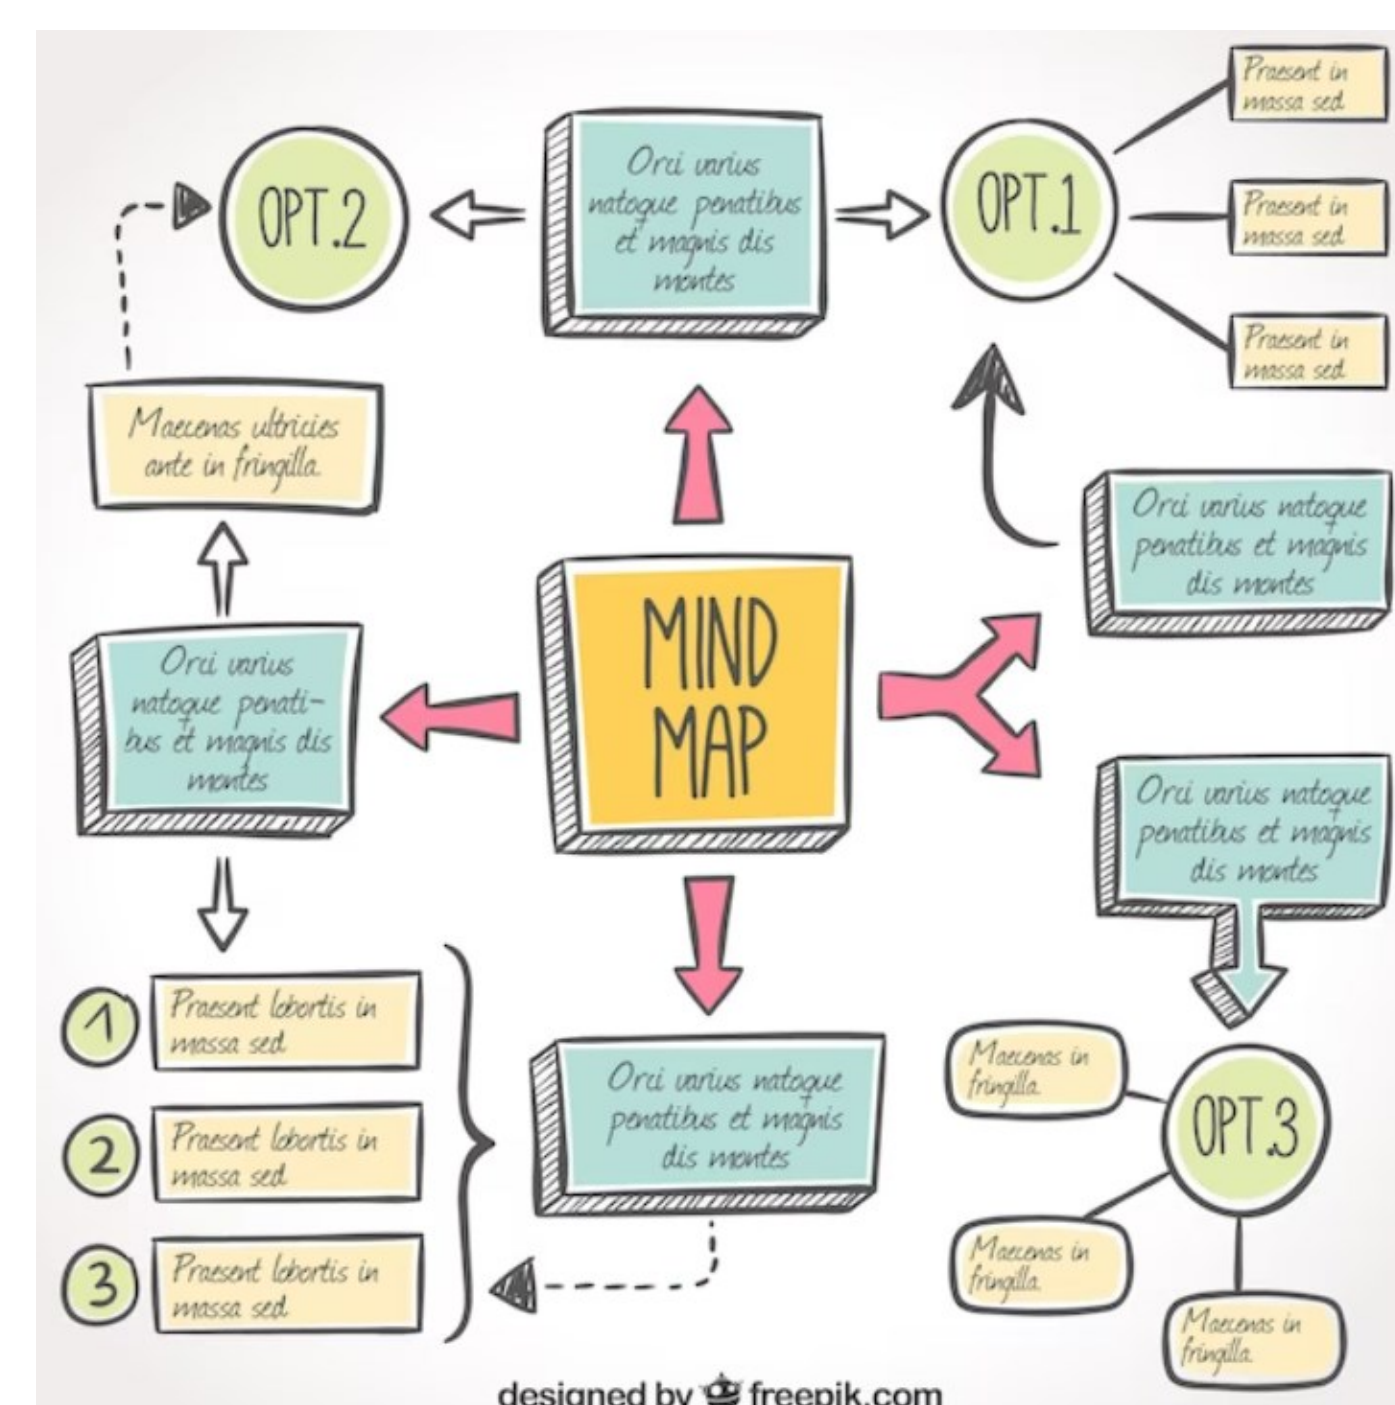

Write me a 7 week project plan that follows the design development plan of {}.

[Output]

Expand on each point further, this time with specific examples and ideas for each point. Format them in a table.

[Output]

Organize the columns as follows { new order of columns }

Combining Strategies

Self Assisted Prompt Improvement

Become my Prompt Creator. Your goal is to help me craft the best possible prompt for my needs. The prompt will be used by you, ChatGPT. You will follow the following process:

1. Your first response will be to ask me what the prompt should be about. I will provide my answer, but we will need to improve it through continual iterations by going through the next steps.
2. Based on my input, you will generate 3 sections.
 - a) Revised prompt (provide your rewritten prompt. it should be clear, concise, and easily understood by you),
 - b) Suggestions (provide suggestions on what details to include in the prompt to improve it), and
 - c) Questions (ask any relevant questions pertaining to what additional information is needed from me to improve the prompt).
3. We will continue this iterative process with me providing additional information to you and you updating the prompt in the Revised prompt section until it's complete.

For Educators:

Time & Effort Saver

We've all been there, there's not enough time in the day. Working with text, GPT excels at generating documents. Brainstorming

- ◇ Building “Mind Maps” for a concept
- ◇ Tailored bulk data
- ◇ Personalized feedback
- ◇ Use IN or PART OF lesson plans

Come up with sample data for fictitious such that {criteria}, {more specificity}

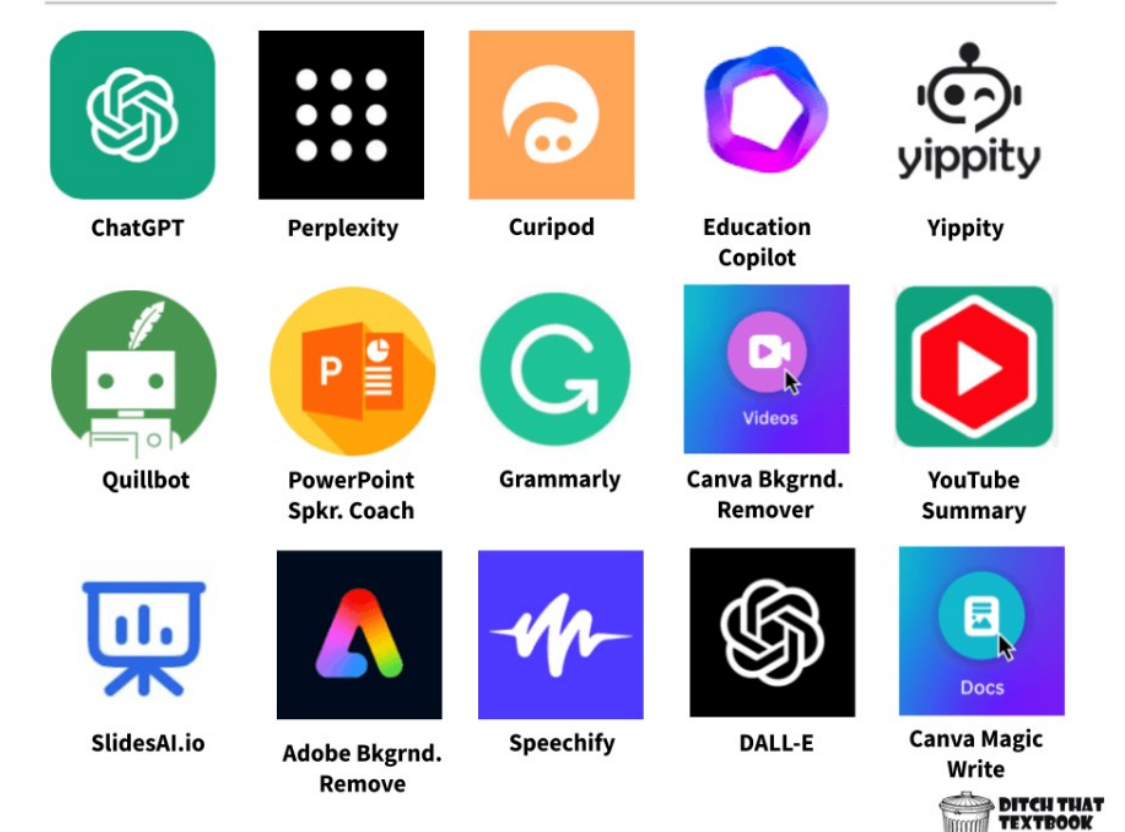

Make feedback for {student} per {criteria}: <document>

What can “higher education faculty” use GPT for?

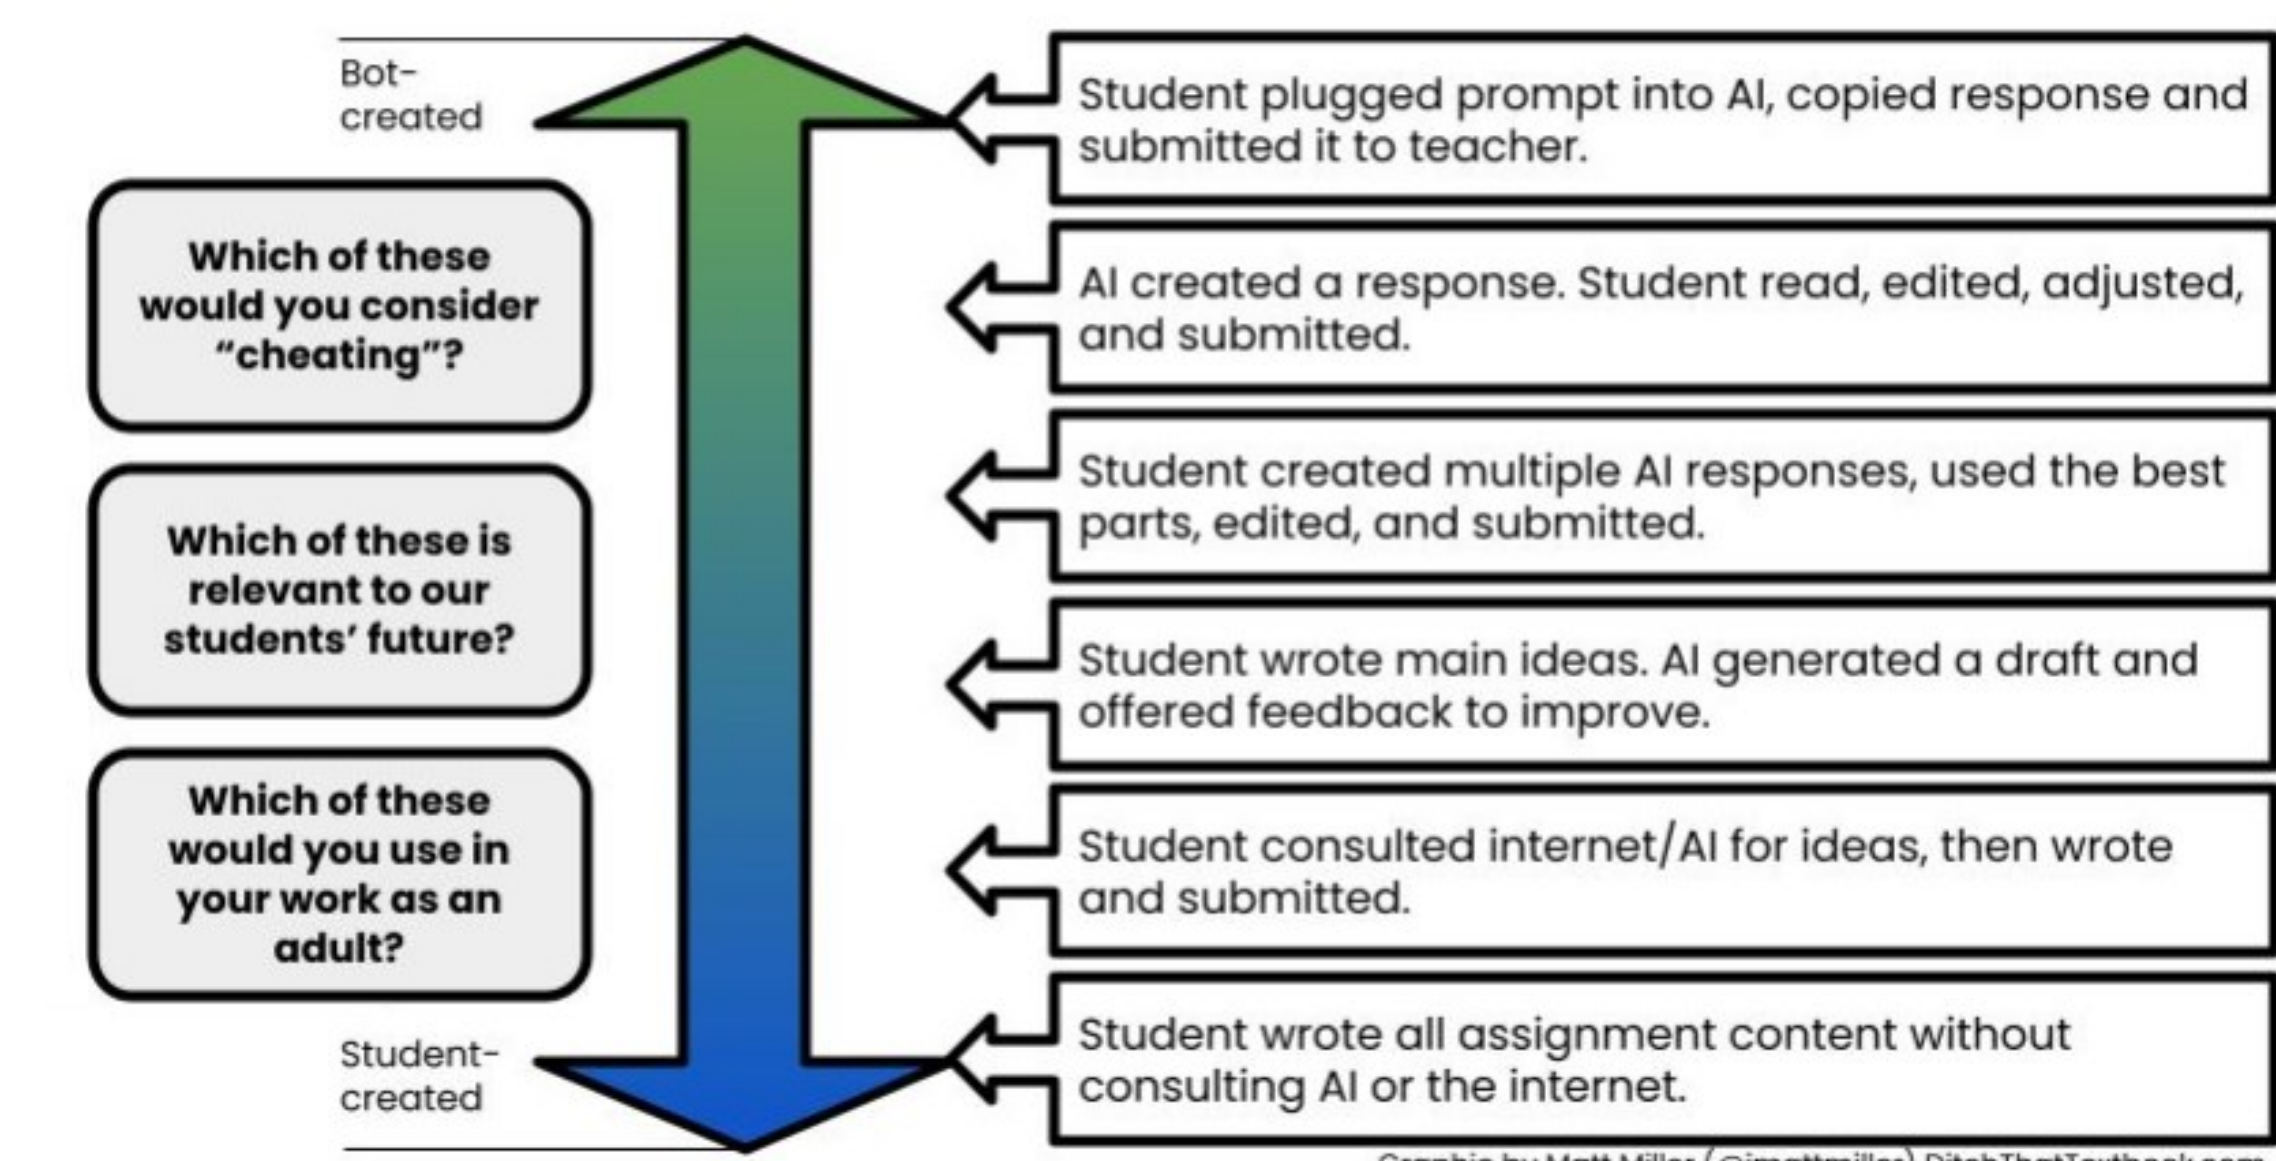

1. Course syllabi
2. Lecture notes and slides
3. Assessment and evaluation tools
4. Student feedback forms
5. Research proposals
6. Conference presentations
7. Journal articles
8. Grant applications
9. Dissertations or thesis
10. Study materials for students
11. Classroom activities and exercises
12. Group projects and group assessments
13. Online course content
14. Student support materials
15. Professional development resources
16. Study guides for exams
17. Learning objectives and outcomes
18. Student progress reports
19. Curriculum development proposals
20. Academic advising materials.

15 AI tools to use in the classroom

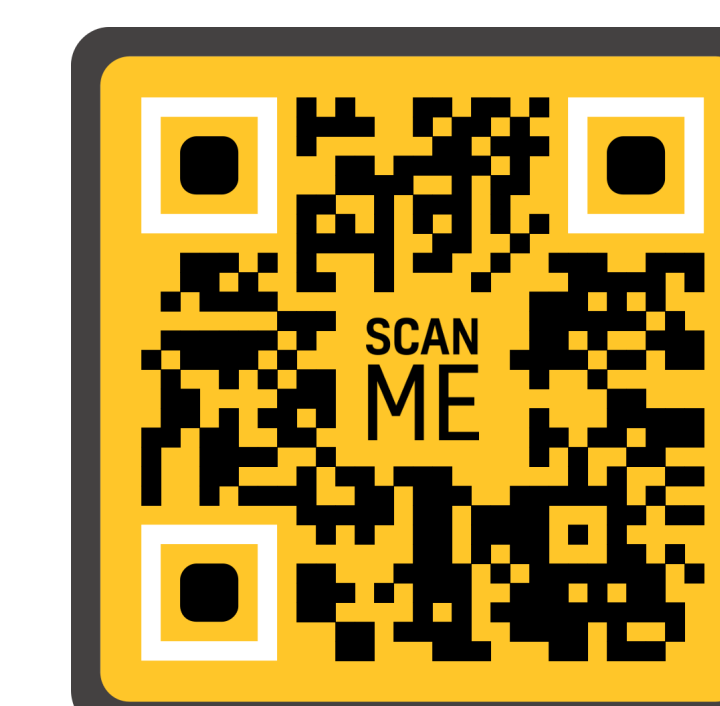

Plagiarism is a risk, we need to keep in mind that GPT is a tool, and tools can be both used and misused.

It's time to rethink “plagiarism” and “cheating”

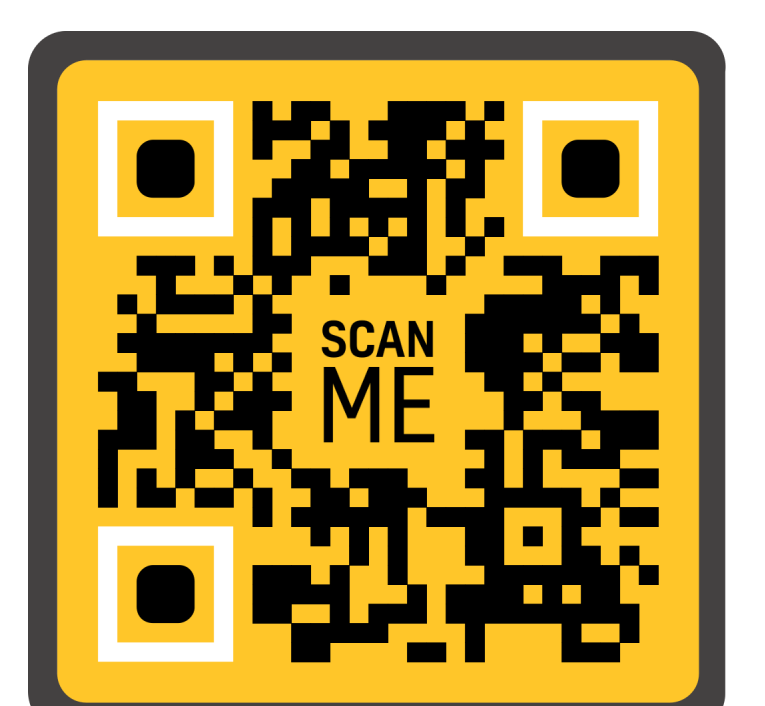

Graphic by Matt Miller (@mattmiller) DitchThatTextbook.com

There are plenty of online resources regarding integration of AI into education. It's a precarious subject, but the tech is here, and refusing to use it puts us at a disadvantage. Arm yourself with knowledge:
